

Complex permeability vs. Frequency

Initial permeability	μ_i	25°C	1300±20%
Saturation magnetic flux density	B_s (mT)	25°C	240
Relative permeability coefficient		($\times 10^{-6}/^\circ\text{C}$)	20~60°C
Curie temperature	T_c (°C)		

Resistivity	ρ ($\Omega\cdot\text{m}$)	10^{-6}
Density	d (kg/m^3)	4.8×10^3

Core diameter (mm)
12.7

Relative loss factor vs. frequency

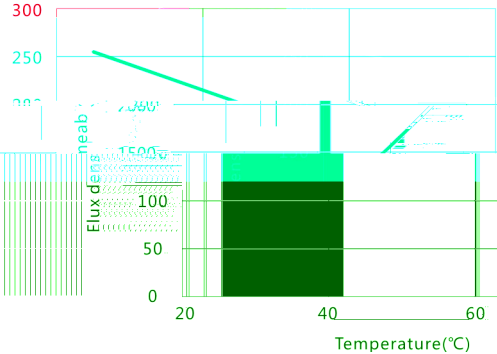

H : 6.5

Temperature

Flux density vs. Temperature

Initial permeability vs. Tc
